Aleksandar Bjelošević

I am a Senior Software Engineer and AI enthusiast with extensive experience in full-stack development and a passion for building intelligent systems. I am actively involved in AI initiatives, leveraging cutting-edge AI workflows and LLM-based architectures to solve complex business problems.

EXPERIENCE

HTEC Group, Banja Luka — *Senior Software engineer / Technology Lead (React/Go)*

August 2022 - Present

- AI Initiative Lead / Software Engineer
    - Architected and developed an AI-driven Capacity Management system that transforms candidate and job data into strategic recommendations using Advanced Language Models (LLMs) and Retrieval Augmented Generation (RAG)
    - Implemented a sophisticated AI workflow featuring Agent Chaining and Orchestration, linking candidate recommendation modules with risk assessment and financial impact estimation
    - Engineered a RAG module utilizing vector embeddings to index historical recruitment data, enhancing the accuracy of LLM prompts with contextual historical outcomes
    - Designed a two-stage prompting strategy for the recommendation engine to filter candidates by core criteria and refine results based on risk factors and constraints
    - Developed synthetic data generation pipelines to create interconnected datasets for candidates, job positions, and historical recruitment records to support AI training and testing
    - Integrated Human-in-the-Loop (HITL) feedback checkpoints to handle low-confidence AI outputs and iteratively refine prompt thresholds and agent logic
- Senior Software engineer:
    - Used React to develop top of the line web application
    - Using GraphQL in order to get backed data
    - Using AWS with CloudFront to deploy applications in scalable manners
    - Create a custom UI library in order to incorporate Atomic

SKILLS

AI Tools & IDEs: Claude Code, Cursor, Kiro, Antigravity

AI & Machine Learning: Large Language Models (LLMs), Retrieval Augmented Generation (RAG), Vector Embeddings, Agent Chaining, Prompt Engineering, Synthetic Data Generation

AI Workflow Management: Human-in-the-Loop (HITL) integration, Automated Capacity Management, Risk & Financial Impact Modeling

component design principles
- Technology Lead - React:
  - Manage team with daily and monthly checkings
  - Check all team technical activities and lead technical solutions
  - Manage application performance issues and create final solutions
- Technology Lead - Go:
  - Set two new project using Golang technologies
  - Worked on a embedded solution using besto Go practices
  - Manage team of people as a tech lead
  - Worked on onboarding new people in the company on Go projects

OROUNDO Mobile GmbH, Banja Luka — *Software engineer / Team Lead*

September 2015 - August 2022

- RESTful API server:
  - Used Node.js express library as backend web server
  - Developed database schema structure using MySQL as main relation database
  - Implemented independent Payment Gateway service using microservice architecture with Node.js Express web server
  - Implemented independent authorization service using OAuth 2.0 protocol
  - Using Redis as a queue management and caching system
  - Incorporated best code design and architectural practices
  - Using TDD as coding approach
- Mobile application:
  - Used React Native as a framework to build IOS and Android applications
  - Used Realm DB as mobile object data store
- Content management system:
  - Used Laravel framework to build fast and modular CMS using blade templating and jQuery library
- Web application:
  - Used Next.js React framework to build fast and optimized web application utilizing server side rendering
  - Integrated Apollo GraphQL as REST API client and application state management
- In house server (IHS) implementation:
  - Built custom IHS environment with raspberry/banana PI

Proficient: GIT, Docker, Redis, Jenkins, Shell, Linux/Unix, Unit/Integration/EndToEnd testings, TDD, Regex, SQL, CI/CD

Familiar: Kubernetes, NoSQL, Golang, databases, Networking, Agile and Scrum methodologies

Soft skills: Multitasking, Teamwork, Dedication, Problem solving, Attention to detail

Other: WordPress, Joomla, Laravel, Fastify, Express, AdonisJS

LANGUAGES

- Serbian: Native
- English: C1

    - and Unifi Access Point controllers that serves as on site access server
    - Improved IHS web server to optimize file download streams
- Exposed public API implementation:
    - Built exposed public API service using Fastify as a Node.js web server
    - Optimized access to public API service in order to serve large number of simultaneous connections
- AWS CDN integration:
    - Built file storage system to be easily configurable in order to use local CDN (*Content Delivery Network*) storage or AWS (*Amazon Web Services*) CloudFront with S3 buckets
    - Using CloudFront signed URLs in order to protect private storage and only expose it to trusted sources over limited period of time
- Continuous integration and Continuous delivery implementation:
    - Built complete CI and CD system for: *development*, *integration*, *staging* and *production* environments using Jenkins and deployment bash scripts
    - Utilizing Bitbucket Pipelines for *staging* and *production* deployments

RT-RK, Banja Luka — *Embedded software engineer*

March 2015 - April 2016

- Created custom Application level platform:
    - Utilized Eclipse's RCP to build Application level platform
    - Used GEF editor and LTD plugins as custom editor plugins
    - Used custom XML layout specification to present applications GUI
    - Integrated LUA programming language as application level script language
- Used LUA programming language to build application and games for embedded STB system
- Used C and C++ programming languages to creating engine for embedded systems(STB) using CeGUI framework

OGO Sense, Banja Luka — *PHP / MySQL Developer*

May 2013 - March 2015

- Build custom PHP websites using Joomla framework
- Created custom and updating existing Joomla components
- Planned and conducted cross browser usability testings

- Developed compatible User Interface functionalities using jQuery/ Mootools libraries with vanilla JavaScript
- Created custom MySQL queries to optimize sites responses
- Generating detailed and summarized project progress reports

EDUCATION

Faculty of Electrical Engineering, Banja Luka — *Bachelor of Engineering*

Field of Study - Computer and Information Sciences

Programming Coursework:

- Java / C# / C++ / PHP applications that utilizes:
    - Client/Server architecture
    - Object Oriented Programming principles and Threads
    - GUI systems
    - Database Interaction using DAO/DTO pattern
- Algorithms and data structures
- Networking
- Artificial intelligence algorithms
- Operating systems
- Programming Coursework:
    - Artificial Intelligence algorithms
    - Algorithms and Data Structures

High School of electrical engineering "Nikola Tesla", Banja Luka
